

**MCBS\_derive\_survey\_Readme.txt**

Purpose: Extract survey data, combine with derived binary claim files, and create derived dataset for use in creation of analytic datasets. Data is derived separately for each of community and institutionalized populations-'inst' in name of program indicates institutionalized code.

Data out is used in next dataset creation step: within imputation.

Community population--Program/code required:  
Derive\_MCBS09.sas

Institutionalized population--Program/code required:  
Derive\_MCBS09\_INST.sas

```

***** ****
Program: 'Derive_MCBS09_INST.sas'
Purpose: define and derive MCBS data from survey instruments for
institutionalized population, merge with claims file for use in
imputation processes
Data in: Insert path for input datasets
Data out: Insert path for output dataset
***** ****
