

Claim_derive_readme.txt

Purpose: Create binary disease file to merge in creation of derived datasets for within imputation and between survey disease calibration.

Order of programs to derive binary disease files:

1. import_excel_mcbs_cgar_definition_and_clean.sas
2. create_cgar_icdstr_1toany_form.sas
3. merge_raw_claim_&YY..sas
4. derive_MCBS_claim_dup.sas
5. derive_MCBS_claim.sas
6. screen.sas

Please see the heading and comments for a more detailed explanation of each processing step.

```
/******  
Program: import_Excel_MCBS_CGAR_Definition_and_clean.sas  
Purpose: import excel disease definition files into SAS  
*****/  

```

```
libname temp 'Insert file path';
```

```
*Note that the every first row of each column in Excel file, the length of  
vars have been expended;  
*This is because SAS9.2 truncates the variable length according to the length  
of the first row;  
*The trick is to make the first row length long enough for all values of that  
var;
```

```
PROC IMPORT OUT= ICD_CGARLABEL  
            DATAFILE= "Insert file path for Disease Definitions  
file\NHA_$DXREF_2015_CCS_W_CGAR_RV_06_20_2017.csv"
