## INTRODUCTION

### OBJECTIVES AND USER ASSUMPTIONS

Volume VII, Categorization of Data Items by Person, Time of Collection or Measurement and General Subject Area, allows users to explore what specific data items might be available under broad categories. Similar data items are grouped and are arranged according to person (mother, child, etc., PART A), time of collection or measurement (PART B), and general subject area (PART C).

Before using this volume, users should consult Chapter 4 in Volume I to gain an understanding of the categories used in Volume VII.

### STRUCTURE OF VOLUME VII

Volume VII is divided into three parts:

- Part A: Categorization of Data Items Organized by Person
- Part B: Categorization of Data Items Organized by Time of Measurement or Observation.
- Part C: Categorization of Data Items Organized by General Subject Area.

The information contained in each part is the same, differing only in the organization of the categories. Each HCPP computerized data item was uniquely assigned a person, time and subject category. For example, the item IQ (5358....VAR) is categorized as CHILD, 4 YEAR, PSYCH. EXAM. This data item originates from study form PS-20.

Over 4000 categories are possible using the person, time and subject categories given in Table 3. In order to present the categories in a logical order three separate hierarchical listings of the categories are given. In Part A, the hierarchy has person as the primary grouping, time as the secondary grouping and subject as the tertiary grouping. For example, all "Mother" categories of time and subject appear next to each other. In Part B, the hierarchy key orders time, person and then subject. In Part C, the hierarchy key is subject, person and time. In each case the ordering of the categories follow the order in which they are listed in Table 3.

## EXAMPLE USE OF CATEGORIZED LISTING

Suppose you are a researcher interested in determining if any association exists between neonatal anoxia and language development. To find out if the NCPP collected data items related to the above, you would first proceed by consulting the alphabetic glossary for the specific data item, neonatal anoxia. Anoxia would be the key word. For general categories such as language development, Part C of this volume, Categorization of Data Item Organized by General Subject Area, would be the best way to enter the User's Guide. Since language is listed as a general subject area (Table 3), a user would examine data items listed under language in Part C, Volume VII. Data items on language development are available on the child at three and eight years of age. Approximately 100 data items are available, including auditory, verbal, comprehension, oral and silent reading, comprehensive, expression, writing and summary evaluations. Most data items are on the master file and are associated with data collection forms PS-10, PS-11, PS-17, PS-41 and PS-42. The variable file contains two data items related to language: 5927....VAR and 5928....VAR. Work file W-8 contains a data item (6318....W-8) on language production; word identification. For detailed information, the researcher would consult Volume II, Part J: Speech, Language and Hearing Exams.

## MASTER FILE CARD NUMBER AND MINDB CASE NUMBER RATIONALE

Computer cards for each NCPP study form are numbered to reflect their origin and possible revisions. Card numbers are assigned to identify the type of data (subject), the presence of multiple cards in a series, NCPP study form and form revisions. The first five digits of each card on the master file are the card number. The study forms and card numbers are given in Figure 1.

The first fourteen columns of each master file computer card contain the master file card number and the MINDB case number. Table 1 identifies the function of each of these columns.

Column 1 identifies multiple cards in a series. It contains a zero for cards unique to a particular form (that is, no other cards are present), for example OS-3, or for cards where repetitive data are contained. Cards for OS-2 are an example of this second type; no new categories of information are included on successive cards, but previous births in excess of four must be

**FIGURE 1. Cards on the Master Data File**

**TABLE 1. Derivation of Master File Card Number and NINDB Case Number.**

<u>Contents</u>	<u>Columns</u>
<b>Master File Card Number</b>	
card identifier	1
general subject matter	2
form number	3-4
revision code	5
<b>NINDB Case Number</b>	
collaborating institution	6-7
type of patient selection	8
gravida identification number	9-12
order of the pregnancy	13
identifies child or gravida	14

recorded on an add-on card. For card series where data entered are unique to a card and more than one card is required to complete the series, a "1" is used to designate the first card, for example OB-5. OB-57, PATH-2 and PEO-14 are exceptions to these rules.

The second digit on the card reveals the general subject matter covered by data on the card. All cards containing information pertaining to obstetrics, for example, are designated by a "3" in column 2; family histories are designated by a "5"; pathology with a "2"; pediatrics, with a "4"; and psychological testing with a "1".

Columns three and four reveal the form number. In the case of forms where old and new forms having different numbers are included together, the number of the latest form appears on the master file. This rule does not apply to data abstracted from several forms by NINCDS staff (ADH forms).

Column 5 of the card contains a revision code indicating which form or combination of forms was used in arriving at data on a particular card. A typical card will have one to three revision codes, with a zero indicating the first version of a form and "1", "2", and "3" indicating later revisions. As a rule, revision codes used on cards differ from card to card; investigators should check the definition of codes provided in Volume II to determine the meaning of revision codes used.

Each woman and child studied in the project received a unique case number (MINDB case number) composed of nine digits, recorded in columns 6 through 14 of all master file cards. The case number identified the institution, the mother and the child. The first two digits represented the collaborating institution (see Table 2). The third digit indicated the type of patient selection. A "1" was used for patients selected for the central core study; a "6" indicated that a patient had been transferred from one institution to another, and a "7" indicated that the patient was part of a special study undertaken by the collaborating institution. The fourth through seventh digits were used to identify the gravida, while the eighth digit identified the order of the pregnancy of a given gravida in the project. The ninth digit was used to identify the gravida or child of the pregnancy; "9" indicated the gravida, "0" indicated the child of a single birth, "1" indicated the first child of a multiple birth, "2" indicated the second child of a multiple birth, etc.

## DATA ITEM IDENTIFICATION AND NAMING

The NCPP data base contains over 6700 different data items and blank filler locations on computer files. We have assigned each of these a unique identification and a terse, stylized name. Because names were chosen to facilitate use of this guide, they do not duplicate names used by NINDB during the active phase of the project. Users should consult appropriate documentation before using data items from the master, variable or work files (Volumes II, III and IV).

The data item identifiers consist of 11 characters. At the far left are four unique numbers that were assigned sequentially. The next character is always a period and is followed by up to six characters. For data items on the master file, these characters describe the data collection form from which a data item was derived; for data items on the variable (VAR) or work (WXX) files, these characters indicate the appropriate file. If the right side is less than six characters, periods are inserted as shown in these examples:

850..OB-34	an item from OB-34; on the master file
3650.PATH-3	an item from PATH-3; on the master file
5223....VAR	an item on the variable file
6340...W-10	an item on work file 10, Rupture of Membranes

We assigned the numbers sequentially as they appear in Volume V. For the master file, we followed the order in which the cards would be found within an NINDB case. All card columns are accounted for by one of our data item identifications. For the variable and work files, the numbers were assigned in the order that data items appear within a case.

We categorized each data item according to the person to whom the data refer, by the time of measurement and/or the time to which the item applies and by general type or subject area (Table 3). Then we assigned names to the data items using the following guidelines:

- The name and the three associated categories had to stand alone - they must describe the data item out of context.
- The first word in the data item name had to be an important or key word when all names were listed alphabetically as in Volumes VI and VII. Thus "cry, abnormal" was used rather than "abnormal cry" because

a researcher is more likely to look for this item under "C" than under "A" in an alphabetic list.

- Secondary key words were preceded with a semicolon to facilitate preparation of the permuted index. For example, "abruptio; placenta" will be found under both the "A" and "P" portion of Volume VI.
- Qualifying words are delimited by commas and will not appear as keywords in Volume VI. Thus "abruptio; placenta, degree" will not be found in the "D" section.
- If medical terminology or usage has changed since the study was conducted, modern terms may be included and will be enclosed in brackets. Thus "mongolism; [Down's syndrome]" will appear under both the "M" and "D" portions of Volume VI.
- If measurement units are associated with a data item name, they are enclosed in parentheses and placed at the end of the name as in "Birthdate (yr)."
- The categories (person, time and subject) are appended to the right of the data item name.

Definitions for each category used in naming data items are given in Table 4 at the end of this introduction. Additional information is found in Chapter 4 of Volume I.

Data item names thus assigned are terse and highly stylized; as we have already indicated, they are not the names used by NINDS during the active phase of the project. Our aim was to develop standardized names that would stand alone. These names are intended to facilitate a user's search for data items potentially useful in a research project. Before an item is used, a researcher should consult its complete description. For a data item from the master files, e.g., 850..03-34, the data item should be traced to the appropriate study form, e.g., 03-34, located in Volume II. A variable file data item, e.g., 5223....VAR, is traced to Volume III, where it is defined and its original source given. A data item from a work file is traced to Volume IV for its description.

Some data items contained in the indexes may include the notation "DO NOT USE." These items are either inaccurate or an alternative data item is available that gives better information. Users will find more appropriate data items by consulting one of the indexes to the data items (Volumes, V, VI and VII).

**TABLE 4. Definition of Person, Time and Subject Categories**

<u>PERSON</u>	<u>DEFINITION</u>
Mother	Study registrant bearing the "study pregnancy"; biologic mother of the "study child"; placenta.
Father	Biologic father of the study child or study pregnancy; (in the case of seroepidemiologic data, this category may indicate either the "father of baby" (not necessarily husband of the mother) or the "husband" (not necessarily related biologically to the study child).
Placenta	The organ of metabolic and gaseous interchange between the fetus and mother; also included in this category are gross and microscopic pathologic data from examination of the umbilical cord.
Fetus	Conceptus; the product of conception including the embryonic stage, i.e., from conception to the moment of birth.
Child	Product of the study pregnancy from the moment of birth onward; study child.
"Surrogate"	Person or persons substituting for the mother of a study child, e.g., adoptive parents, foster parents or guardian.
Family	Person or persons biologically related to the mother or father of the study child.
Siblings	Child or children having one or both of the same biologic parents as the study child; siblings; half siblings; full siblings.

**TABLE 4. Definition of Person, Time  
and Subject Categories (Cont.)**

<u>TIME</u>	<u>DEFINITION</u>
General	Data with no pertinent time period or data pertaining to more than one time period.
Prenatal in Registration	Data pertaining to the period prior to conception of the study pregnancy. Data collected at the time of study mother's registration in the study.
Prenatal	Data pertaining to the period from conception of the study pregnancy to delivery of the study child.
Admission	Data collected at the time of study mother's admission to the hospital for delivery of the study child.
Antepartum	Data pertaining to the period from admission for delivery or onset of labor to delivery of the study child.
Delivery	Data pertaining to the time period during which delivery of the study child occurred.
Post Partum	Data pertaining to the study mother collected during the period immediately following birth of the study child.
Neonatal	Data pertaining to the study child during the period from birth to one month of age; the majority of these data were collected prior to or at the time a study child was discharged from the hospital.
Four Month	Data collected at the time of the four month examination of the study child.
Eight Month	Data collected at the time of the eight month examination of the study child.
One Year	Data collected at the time of the one year examination of the study child.
Three Year	Data collected at the time of the three year examination of the study child.
Four Year	Data collected at the time of the four year examination of the study child.
Seven Year	Data collected at the time of the seven year examination of the study child.
Eight Year	Data collected at the time of the eight year examination of the study child.

**TABLE 4. Definition of Person, Time  
and Subject Categories (Cont.)**

<u>SUBJECT</u>	<u>DEFINITION</u>
Administrative	Data pertaining to the administrative aspects of the study.
Anesthesia	Data on medications and procedures used to obtain anesthesia.
Clin. Impression	Impression of abnormality or dysfunction gained by an examiner following evaluation of clinical signs and symptoms and including a subjective component.
Clinical Lab	Data obtained from laboratory examination of clinical specimens.
Current Pregnancy	Personal data and medically relevant information pertaining to the study pregnancy for which the mother is enrolled.
Environ. Exposure	Data on exposure to occupational or other environmental entities or hazards.
Events	Data related to a specific event, occurrence or incidence.
Hearing	Data obtained from examination and testing of hearing function.
Hospitalizations	Data on specific hospital admissions or the number of hospitalizations.
Language	Data obtained from examination and testing of language function.
Linkage	Data on the genetic relationships of family members to the study mother, father or child.
Malformations	Data on the conditions in which failure of normal development has resulted in abnormal physical traits existing at the time of birth.
Diag. & Cond.	Data on specific diagnoses or conditions obtained from past medical history or examination during the study.
Med. History	Data obtained from the study participant or medical records relevant to past or current medical diagnoses or conditions.
Medications	Data on drugs or medications used.
Neurological Exam	Data obtained from observation and physical examination of the central nervous system.
Observations	Data obtained from observations not categorized elsewhere.
Pathology	Data obtained from clinical and anatomical pathological examination.
Physical Exam	Data obtained from physical examination of the study participant.
Procedure	Data relating to specific procedures performed on the study participant prior to or during the period of enrollment in the study.
Psych. Exam	Data obtained from the psychological examinations and observations.

**TABLE 4. Definition of Person, Time  
and Subject Categories. (Cont.)**

SUBJECT	DEFINITION
Reproductive Hist.	Data pertaining to the outcome of pregnancies prior to and or during the period of enrollment in the study.
Serology	Data obtained from the laboratory examination of serum by specific immunologic methods.
Socioecon. Info	Data related to the social and economic characteristics and environment of the study participant.
Speech	Data obtained from examination and observation of speech function.
Vision	Data obtained from examination of the eyes.
Work History	Data pertaining to occupation and employment prior to and during the period of enrollment in the study.
X-Ray	Data on diagnostic x rays and diagnostic or therapeutic radiological procedures.
Summary	Data presented as a summary of data collected and recorded elsewhere.
Gyn. History	Medical history specifically related to the female genital tract, reproductive physiology and endocrinology.
Special Studies	Data pertaining to participation in other special organized studies conducted during the period of enrollment in the study.
Fam/Genetic Hist.	Data on the medical histories of family members specifically related to the study child.
SLH Exam	Data obtained from the speech, language and hearing tests not specifically or exclusively related to one of the other

## Siblings, Preconception, Fam/Genetic Hist., (continued)

SIBSHIP  
PRECONCEPTION  
FAM/GENETIC HIST.

26 ..FHM-9 Death, infants siblings, greater than 28 days, total number prior to study child  
 2690 ..FHM-9 Death, neonatal siblings, 27 days or less, total number prior to study child  
 2486 ..GEN-5 Developmental retardation, behavioral/emotional siblings  
 2465 ..GEN-5 Developmental retardation, mental siblings  
 2697 ..FHM-9 Developmental retardation, physical, mental, behavioral siblings, total number prior to study child  
 2484 ..GEN-5 Developmental retardation, physical siblings  
 2468 ..GEN-5 Fetal death; blood incompatibility; erythroblastosis fetalis; siblings  
 2469 ..GEN-5 Liveborn; blood incompatibility, no transfusion; siblings  
 2470 ..GEN-5 Liveborn; blood incompatibility, requiring exchange transfusion; siblings  
 2479 ..GEN-5 Motor defect due to infection; siblings  
 2478 ..GEN-5 Motor defect due to injury; siblings  
 2460 ..GEN-5 Motor defect, other; siblings  
 2695 ..FHM-9 Motor defects; siblings, total number prior to study child  
 2692 ..FHM-9 Rh incompatibility; blood group incompatibility; jaundice, neonatal; transfusions; siblings, total number prior to study child  
 2477 ..GEN-5 Seizures; convulsions; epilepsy; siblings  
 5184 ..VAR Seizures; convulsions; epilepsy; siblings, total number  
 2694 ..FHM-9 Seizures; convulsions; epilepsy; siblings, total number  
 2483 ..GEN-5 Sensory defects; speech defects; siblings  
 2481 ..GEN-5 Sensory defects; visual blindness; siblings  
 2482 ..GEN-5 Sensory defects; visual; deafness; siblings  
 2696 ..FHM-9 Sensory defects; hearing; speech; vision; siblings, total number prior to study child  
 2423 ..GEN-5 Siblings full; death, infant, greater than 28 days, total number  
 2422 ..GEN-5 Siblings full; death, neonatal, total number  
 2429 ..GEN-5 Siblings full; developmental retardation, physical, mental, behavioral, total number  
 2425 ..GEN-5 Siblings full; malformation, congenital, total number  
 2427 ..GEN-5 Siblings full; motor defect, total number  
 2424 ..GEN-5 Siblings full; Rh incompatibility; blood group incompatibility; jaundice, neonatal; transfusion, total number  
 2426 ..GEN-5 Siblings full; seizures; convulsions; epilepsy, total number  
 2428 ..GEN-5 Siblings full; sensory defects; hearing; speech; vision, total number  
 2440 ..GEN-5 Siblings half; death, infant, greater than 28 days, total number  
 2439 ..GEN-5 Siblings half; death, neonatal, total number  
 2446 ..GEN-5 Siblings half; developmental retardation, physical, mental, behavioral, total number
